NOTAS

9804 - 9923
November 4, 1961

Oak pine stands in the mountains about 32
road miles west of Yaguita and about 70 miles northwest
of Yaguita, state of Jalisco, Mexico. Elevation about 6300 feet. Dish yellow.
Rayol-5, typically 5, white.

Calea sp.

Eupatorium lemmae Rob.
3876 - November 4, 1962
Soil wet soil along the edge
Top of the mountain
about 32 road miles west
Tepotzlan, and about 70
miles northwest of Aculco,
East of Jalisco, Mexico.
Eruption about 630 feet.
Ficke yellow. Rapewite,
morny 8.

Cosmos mcraughii Sherff
det. E.E. Sherff
1867 - November 5, 1962
Open oak-pine woods in the mountains about 19 and about 60 miles north-west of Atlixco, State of Puebla, Mexico. Elev. about 6,000 feet. Plants 6-8 dm. tall, much branched, resembling chamae. The branches of the season somewhat glaucous. Heads white, with one or two rays. Anthers green.

Guardiola mexicana Humb. & Bonpl.
1888 - November 5, 1962
Subtropical deciduous forest about 11 miles
south of Acatlan, Stat. Jalisco, Mexico,
operating about 4000 feet.
Granile, arboreal shrubs up to about 4
m. tall, the trunk up to
about 1 cm thick at the
base. Heads smooth deep

Verbesina Crocata (Cav.) Less.

Verbesina 8
Martín Mar 7, 1962 - 9809

Martín Meadow, about 4.5
miles north of Juana Catlan,
and a few miles south of
Guadalajara, State of Jalisco,
Mexico. Elevation about
5000 feet. Native Plants
are predominantly Perennials
with few annuals. Foliage is
usually 7-9 leaves, with typically 5
'rays', these apparently fertile.
Achenes long, narrow, somewhat
flattened but not winged.

Bidens aurea (Ait.) Sherff

dupl. det. E.E. Sherff

11K 2

Colonsia: 5
Same place as 9809.
Plants single, attained from about 1-2 feet tall.
Disk bright yellow, Ray solitary, rather pale yellow.

Schkuhria schkurioides (Link + Otto) Thellung
November 7, 1962

In station standing water at the edge of Atotonilcoillo, about 25 miles southeast of Guadalajara, State of Jalisco, Mexico. Elevation 2000 feet. Plants evidently annual; but the stem coarse at the base. Two heads yellow, with 13-39 rays.

Oliviaea tricuspis Sch.-Bip.

Atotonilcoillo, cens. 696
7019 7-6 Aug 47.8

Oaxacca 7
1838 - November 8, 1762
Shady site along a trickling stream in the barranca of the Rio Grande de Santiago, about 5 road miles northeast of Jalisco, Mexico.

Elevation about 3500 feet.

Eupatorium quadrangulare DC.
13 - November 8, 1962
In field under light shade of tropical deciduous forest, at foot of bottom of the barranca of the Rio Grande de Santiago, about 5 road miles north-east of Guadalajara, State of Jalisco, Mexico. Elevation about 3500 feet.

Erickella diffusa (Vahl) Gray

Brickellia 7
November 3, 1962

Openings in stunted forest near the bottom of the Rio Grande de Santiago, about 5 road miles northeast of Guadalupe, State of Tamaulipas, Mexico. The same species also observed near Carrancas. Elevation about 3,500 feet. The same species observed near the top of the Carrancas, at nearly 5,000 feet. Shrub 1-1.5 m tall. Heads yellow with 8-12 rays. Ray arches empty, with a pappus of small scales. Pappus thin, blanched 2 annular scales and about 4 shorter scales. Viguiera dentata (Cav.) Spreng. var. canescens (Oc.) Blake.
Trixis hyposericea S. Wats.

Type locality

Trixis 10
7816 - November 8, 1902
Same place as 9.8.15, but
elevation about 5000 feet.
Much branched shrubs
less than 1 m. tall, with
drooping leaves.

Flowers white, with
one or no rays. Anthers
green.

Guardiola angustifolia (Gray) Rob.
November 9, 1962

On grand along a small stream 15 miles west of I, Escondida, on the road to La Cristobal de la Barranca, State T Jalisco, Mexico. Elev. 7700 feet.

Plants nearly less shrubly around the base, less than 1 ft. tall. Heads orange-yellow, with about 15 rays.

Coreopsis cordylocarpa Gray

The Vaughn file 10
98/18 - November 9, 1962
Same plant as 98/17. Plants about 6 ft. tall, monopodial stems growing toward the west. Rains 10-13.

Jaumea peduncularis (H. A.) Dorn. + Hall.
9319 - July 9, 1962
In open and grass country, about 15 miles north of Guadalajara, state of Jalisco, Mexico. Elevation about 5100 feet.

Scrambling shrub about 1.5 m tall. Inner involucral bracts linear-lanceolate, purplish. Achenes compressed, quadrangular, not issuing; pappus 17-4 short, broad, with 1-recurved scales. Ray achenes apparently sterile, with reduced pappus?

2 Viguiera pachycephala (DC.) Hemsl.
November 9, 1962

Open, grassy, north-east slope of small ravine in cal-grass savanna region about 10 road miles north of Guadalajara, on road to San Cristobal de la Barranca, state of Jalisco, Mexico. Elevation about 5,000 feet, shrubs 8-15 dm. tall. Flowering majority.

Calea albida Gray
November 9, 1962

Open, oak-grass savanna
overlying about 17 road miles
north of Yucatán, on
the road to San Cristobal de la
Estrada, state of Jalisco.

Elevation about
5200 feet.

Plants about 1 m tall, shrubby toward the
Rayas, light yellow, Dish Ivy.

\textit{Cosmos landii} Sherff
1972 - November 9, 1972
Open oak-grass savanna
Causing about 23 road
miles north of Ixtapaná,
on the road to San Cristóbal
de la Barranca, state of
Jalisco, Mexico. Elevations
about 1900 feet.
Plants slenderly Toward
the base, up to about 1 m.

N. Heads, yellow, rays
0.10, usually 8, sterile
with reduced rays. Achenes
plump, extremely hispid, con-
stricted at the synund asa small
ring that is covered by a pappus
of several short, men or less
connate scales.

Aspilia angusta Blake
In prog. small flat part of way from the farm on the Rio londe la Santiago (ophiolite rock), 25 road miles north of Yecapixtla, on the road to San Cristobal de la Barranca, State of Jalisco, elevation about 4,500 feet. Heads yellow, with 5 rays. Plants not contact with non-scented Papaver mostly 1 seedling, flattened and dry, and 3 other short scales, all manner less to none. Plants variably covered with a looseomentum, perhaps resulting from fungus attack.

Tagetes tubulata Cerm.
9824 - November 9, 1962
Rocky, rhylitic slopes in the Llanura de the Rio Grande de Santiago, about 25
road miles north of Guadalajara, state of Jalisco, Mexico. Elevation about 4500 ft.
Plants several-stemmed
Shrubby helian, up to about
1m. tall. Flowers solitary

Eravatirum thyrsiflorum
(Greeno) Rob.
11/8/5 - November 9, 1962
Same place as 118-24.
Flowers about 1-1.5 in. tall.
Flowers white

Stevia subpubescens L. ag.
November 10, 1962

Shady places in coastal mountainous forest 5 road miles southwest of Morejonal de Oro, and about 45 road miles north of Guadalajara, State of Zacatecas, Mexico.

Elevation about 4300 feet.

Stems solitary.

Flowers lavender-pink.

5 m west 14 m north 147°

857.4

Stevia elongata HBK. ✓
1963 - November 30, 1962

In open grassy hill country about 3.5 miles southwest of the town of Tecozautla de Ocampo, and less than a mile from the boundary of Jalisco State, about 42 miles north of Guadalajara, State of Jalisco, Mexico. Elevation about 4500 feet. stems numerous, clustered, upright, narrowly cylindrical. flowers dull pinkish.
